CRANCE DEPARTMENT. Under the Supervision of the Executive Committee of Pomera Grange.

How to Make Wheat. We find the following exticle written by a Maryland wheat grower, published in the American Farmer, and present it to our farmers with the hope that come good may result from its perusal, either by adepting his suggestions or intro-ducing such other improvement as may occur to each individual mind. This writer pays no regard to the use of peavines as a fertilizer for wheat, and in this we must regard his practice as defective, at least for this section of the country. We believe that a heavy coat of peavines plowed in with 100 pounds of acid phosphate to the acre will make good wheat on our clay lands. But if we have no peavines ready for use, then take 100 pounds of phosphate, 200 pounds cotton seed, 100 pounds stable manure and 50 pounds German Kainite, carefully compost and regularly distribute over each acre, and a good crop of wheat may be expected from any kind of land. The vegetable matter in this compost will make strong straw and hasten maturity, and the phosphate will make plump, heavy grain. Farmers submit to great loss by using raw coion seed. Manures cannot make ground rich by mixing them with the soil. They must be incorporated with it chemically so as to be absorbed by the plant roots. There is a great variety of opinion among our farmers about the proper time for sowing wheat. Some sow whenever they can, from October to Christmas, and some few run their sowing over to January. A good farmer of Town Creek sowed the 15th of December and made 40 branhels to the acre, and then pronounced that date early enough to sow wheat. So it is in some places and under favorable circumstances. That brother had the benefit of the exception; his land was well manured and thoroughly prepared, and he completed his sowing on that day. Either early or late dowing is objectionable, and for that reason our farmers should fix on some intermediate time. The 15th of November is late enough to avoid injury by the fiy, and early enough to bring in the crop before the rust damages it badly in the Sprieg. Mary-baud farmers sow from the 15th of Senpounds German Kainite, carefully compost and regularly distribute over each

damages it badly in the Sprirg. Mary-laud farmers sow from the 15th of Sep-tember to the 15th of October, from 1 to Ten, twenty, thirty and forty bushels of wheat may be and have often been made on one acre of ground. Why is it that one farmer makes only five bushels of wheat on an acre, while another farmer makes forty? The one has brains and uses them—the other-depends on "the mercy of chance."

Benjamin Fitzhugh, of Frederick city, says that the Lawson Brothers, living near Urbans, in Montgomery county, made two years ago fifty-two bushels of wheat per acre on eight-dellar land."

Mr. Philip Rits, living near Walla-Walla, wasnington Territory, informed 14 bushels to the scre:

walla, washington Territory, informed me that one of his neighbors claims to have made one hundred bushels of prime wheat on an acre. Senator Morton went to see this man and obtained a sample of his wheat. Forty to sixty bushels is often made in Oregon.

But the farmer who expects to make tweaty or thirty or forty bushels on an acre of poor land, badly farm. I, will be terribly disappointed. To make a good cop of wheat, we must have good land, in good order, sown at the proper time,

in good order, sown at the proper time, in the proper way, and properly har-

in good order, sown at the proper time, in the proper way, and properly harvested.

We mix bara-yard or hog-yard manure, or other fertilizers, to make the wheat-plant grow. On poor land the stalk is too small, too light. If the growth is too luxuriant the wheat may lodge, which hinders the growth and development of the grain. But when on good land a small quantity of manure acts finely on a wheat crop which mintures early on manured land.

"When there is no phosphoric acid in the soil, wheat will not grow," says Liebig. There is twenty-six pounds of phosphoric acid in twenty-five bushels of wheat. If the phosphoric acid of a soil has been exhausted by repeated crops, or if that quantity of soluble phosphoric acid cannot be furnished by the soil, twenty-five bushels of wheat cannot be made on that acre. Phosphoric acid is furnished most certainly by bones of animals. It is claimed that it is present in the South Carolins rock also. Our experience is that those who use ub-sphates make wheat—those that do not use phosphates make, little or no wheat.

If we had some means of straighth-Aing the wheat stalk, so that the wheat would stand up, the heads would fill better, the grains would be plumper and more perfect. Liabig says that "soluble silicate of potash ix parts strength to the growing crop." It is claimed that soluble silicate of potash ix parts strength to the growing crop." It is claimed that soluble silicate of potash exists in the mari of Galvert county, in Maryland, and in some mari

of potash imparts strength to the growing crop." It is claimed that soluble silicate of potash exists in the mail of Calvere county, in Maryland, and in some mart from New Jersey.

If the farmer wants to make twenty, thirty or forty bushels of wheat to the nurs, he know here is a land. Land is made rich by barnyard or log-yard manure, or by clover. Line will increase the crop of wheat and of all cereals and grass crops likewise, on all cells, rich and poor. I think land cannot be made rich twishout lime.

The elements of fertility may be in a set in a land. I have a land be condition; therefore, the soil will be unproductive. The productiveness of z coil is in preportion to the salubility of its fartilising materials. Liebig says: "Each wire immensed in sulphuric soil wire immensed in sulphuric soil wire immensed in sulphuric soil is rapidly of disad." The swe seids combined have a power which singly they do not possess. Lime, applied to a soil, may decompose one ingretient, and this decomposition are; liberate a number of chemical agents, which will give enemy to the growth and davelopment of all plants. A little laws a leaves the whole lamp."

the use of finely-ground bones—bones dissolved in sulphuric acid. The value of all fertilizers is in proportion to their solubility. The heat of the atmosphere and the moisture will dissolve the raw bone in time for a crop. If there is thirty-seven per cent, of phosphoric acid in one hundred pounds of bones in a soluble condition, one hundred pounds of bones on an acre, regularly distributed, would be more than enough to make twenty five bushels of wheat. If six hundred pounds per acre were used, and only twenty-five bushels of wheat were made, the residue of the phosphoric acid in the soil would be so much dead capital.

and fifty pounds of ground bones, one hundred pounds of Peruvian guano, one bushel of plaster and one bushel of salt per scre, drilled in with the wheat. A

bushel of plaster and one bushel of salt per acre, drilled in with the wheat. A first-rate spolication to poor land.

Some of our farmers use one hundred and fifty pounds of Slingluff's dissolved bones, a bushel of plaster and a bushel of salt to an acre, drilled in with the wheat. Mr. Geo. W. Harris, near Hagerstown, raised this year one thousand bushels of wheat on thirty acres of land, He used 167 pounds of Slingluff's dissolved bone to the acre.

Our farmers, this year, who used phosphates, made good crops of wheat. Those who used no phosphates made none. When Dr. Higgins, our State chemist, said, twenty-five years ago, that our land was in need of phosphates, many of our farmers wondered whether he knew anything about it. Now all our farmers think we ought to use phosphates, and phosphates are generally used. Whether it would be better to use unmixed raw bone, or bone dissolved in sulphuric acid, dried and ground over; or bones, raw or dissolved, mixed with Peruvian guano; are problems to be solved by our agricultural people. One thing is certain: our English cousins found out fifty years ago that if they wanted to double their crops of wheat and turnips they must use bones freely.

Buried Alive in a Well.

placed it as near his mouth as the boards over him would permit. Soon after this was accomplished, the sand settled solidly above him, leaving only the vacuum under the board, which soon filled so close as to imprison the arm that had been at liberty, and also to render his head immovable.

In this situation, plainly depicted by himself in sepulchral tones, through the air tube, and perfectly audible at the top of the well, William Selves, then six hours without food, and cramped and chilled by the cold sand, said he would hold on to life if there were brave hearts enough above him to undertake his release, knowing full well the danger to those who might attempt it in a hurry. The task was to remove from 13 to 18 feet of sand from the bottom of a well 116 feet

paid poil tax.

The heavy tax imposed by the last legislature has pretty much put an end to horse racing fa Texas.

A resent census gives the population of Wilmington, N. C., at 17,004, an increase of nearly 4,000 since 1870.

EARLE, WELLS & WESTMORELAND, ORR & TRIBBLE,

Plaintiff's Attorneys. Sept 11, 1879 THE SUN FOR 1879.

THE SUN FOR 1879.

The Scr. will be printed every day during the year to come. Its purposes and method will be the same as in the past: To present all the news in a a readable shape, and to tell the truth though the heavens fall.

The Sun has been, and will continue to be independent of everybedy and everything save the Truth and its own convictions of duty. That is the only policy which an honest newspaper need have. That is the only which an honest newspaper need have. That is the only which has won for this newspaper the condence and friendship of a wider constituency than was ever enjoyed by any other American Journal.

This Sun is the newspaper for the people. It is not for the rich man against the poor man, or for the poor man against the rich man, but it seeks to do equal justice to all the interests in the community. It is not the organ of any person, class, seet or party. There need be no mystery about its loves and hates. It is for the honest man against the organs every time. It is for the honest man against the owner, the recent as against the dishonest Democrat. It does not take its cue from the utterances of any politician or political organization. It gives its report unreservedly when men or measures are in agreement with the Constitution and with the principles upon which this Republic was founded for the people. Whenever the Constitution and constitutional principles are violated—as in the outrageous conspiracy of 1376, by which a man not elected was placed in the President's office, where he still reunains—it speaks out for the right. That is Tim Sun has fairly carned the hearty harred or reasels, frauds and humbers of all series and every endead.

he still remains—it speaks out for the right. That is Time Sun's idea of Independence. In this respect there will be no change in its programms for 1879.

This Sun has fairly carned the hearty hatred of reacals, frauds, and humbags of all sorts and sizes. It hopes to deserve that hatred not less in the year fareals, frauds, and humbags of all sorts and sizes. It hopes to deserve that hatred not less in the year 1879, than in 1878, 1877, or any year gone by. The Sun will continue to thin on the wicked with unmitigated brightness.

While the lessons of the past should be constantly kept before the people, This Sun does not propose to make itself in 1879 a bagasine of ancient history. It is printed for the men and women of to-day. It has both the disposition and the ability to afford its readers the promptest, fullest, and most accurate intelligence of whatever in the wide world is worth atten" on. To this end the resources belonging to "d-d-established prosperity will be liberally employed.

The present cajointed condition of parties in this country, and the uncertainty of the future, lend an extraordinary significance to the events of the coming year. The discussions of the press, the debates and acts of Congress, and the movements of the leaders in every section of the Republic will have a direct bearing on the Presidential election of the leaders in every section of the Republic will have a direct bearing on the Presidential election of is80—an event which must be regarded with this most anxious interest may be added the probability in the Demotria's will control both houng of fraud in any form. To present with accuracy and clearness the exact situation in each of its varying phases, and to "keypound, according to its well-known methods, the principles that should guide us through the labyrint, by will be seen an extra copy where for 1879.

We have the means of making The Sun, as a political, a literary and a general newspaper, more notorisaling and more useful than ever before; and we mean in apply them fread
